

Cyteir Therapeutics is an early stage biopharmaceutical company developing new therapeutics that target DNA repair pathways for treatment of cancer and autoimmune disorders. We are committed to the promise of a better way to treat even the most difficult diseases, and are driven by our belief that all patients deserve treatments that do not compromise their quality of life.

***We are seeking a Scientist I/II/III or Senior Scientist to join our team and contribute to the advancement of multiple programs. The successful candidate will have the opportunity to work in a small company setting providing innovative solutions to solve scientific challenges.***

#### **Key Responsibilities and Expectations**

- Perform *in vitro* assays related to preclinical R&D for our lead program
- Perform *in vivo* efficacy studies using xenograft and transgenic disease models
- Work with senior leadership to organize and manage vendors and CROs and evaluate study reports
- Perform laboratory work related to the testing of candidate compounds in bioactivity and *in vitro* safety assays
- Develop and implement new assays to support new drug discovery efforts
- Compile and analyze data and contribute to preparation of scientific reports, invention disclosures, and meeting presentations
- Lead a small research team and ensure team members meet goals
- Laboratory management including oversight of inventory, ordering, and compliance matters
- Commitment to meeting or exceeding aggressive commercial timelines without compromising quality
- Adherence to highest ethical standards

#### **Required Skills**

- Extensive laboratory skills and knowledge of research laboratory best practices
- Solid foundation of biological knowledge
- Experience running biological assays in an industry setting
- Strong analytical and problem solving skills
- A collaborative work ethic and a willingness to mentor junior colleagues
- Demonstrated success meeting aggressive timelines
- Excellent organizational and record keeping skills
- Solid writing, presentation and communication skills

#### **Qualifications**

- PhD (or equivalent) in biology, biochemistry, toxicology, or a related field, with at least 2+ years of industry experience
- Experience with cell culture, cell biology, biochemistry, assay development and small molecule testing or screening and a track record of productivity
- Demonstrated success working in a team environment and in collaborative programs.
- Ability to lead a small research team

Title and salary commensurate with experience.
